

R users

Python/Julia users

Create a new, empty github repository <my-repo>

Download the Computo template for your notebook:

```
git clone --bare git@github.com:computorg/<template-repo>
```

<template-repo> =
template-computo-Rmarkdown

<template-repo> =
template-computo-myst

rename <template-repo> in <my-repo>
and push its contents to your own repository with
`git push --mirror`

Write a notebook describing your contribution

Use for example R Studio to
edit the .Rmd file

Use for example Jupyter Lab to
edit the .ipynb file

Configure binder:

list dependencies in environment.yml

Verify reproducibility & export to HTML/PDF:

```
git commit -m "[build]" ; git push
```

(this will trigger a github action)

Submit paper on Scholastica

<https://computo.scholasticahq.com/for-authors>
Provide URL to <my-repo>, metadata, generated PDF
